

“Commonly run by large companies or government agencies. However, they are also increasingly being used to provide a fast-growing cloud solution service for private and business applications”.

CLOUD INFRASTRUCTURE

EVERYWHERE
Universal Coverage

AFFORDABLE
Highly competitive
& cost effective

RELIABLE
Qualitt and efficient
Service

Cloud infrastructure refers to a virtual infrastructure that is delivered or accessed via a network or the internet.

Ubora Systems & Solutions is in the forefront of providing cloud based computing to its esteemed clients. Cloud infrastructure is one of the most basic products delivered by cloud computing services through the Infrastructure as a Service (IaaS) model.

Through the service, users can create their own IT infrastructure complete with processing, storage and networking fabric resources that can be configured in any way, just as with a physical data center enterprise infrastructure. In most cases, this provides more flexibility in infrastructure design, as it can be easily set up, replaced or deleted as opposed to a physical one, which requires manual work, especially when network connectivity needs to be modified or reworked

CLOUD INFRASTRUCTURE

ADVANTAGES

- Increased data reliability:
- Unlike desktop computing, in which if a hard disk crashes and destroy all your valuable data, a computer crashing in the cloud should not affect the storage of your data. if your personal computer crashes, all your data is still out there in the cloud, still accessible
- In a world where few individual desktop PC users back up their data on a regular basis, cloud computing is a data-safe computing platform!
- Instant software updates:
- Another advantage to cloud computing is that you are no longer faced with choosing between obsolete software and high upgrade costs.
- When the application is web-based, updates happen automatically available the next time you log into the cloud.
- When you access a web-based application, you get the latest version without needing to pay for or download an upgrade.
- Improved document format compatibility.
- You do not have to worry about the documents you create on your machine being compatible with other users' applications or OSes
- There are potentially no format incompatibilities when everyone is sharing documents and applications in the cloud.
- Easier group collaboration:
- Sharing documents leads directly to better collaboration.
- Many users do this as it is an important advantages of cloud computing
- Device independence.
- You are no longer tethered to a single computer or network.
- Changes to computers, applications and documents follow you through the cloud.
- Move to a portable device, and your applications and documents are still available.
